**ABSTRACT**

Accessories that can improve a specific functionality of an electronic device, can readily attach to an electronic device, can be easy to use, and can have a small and efficient form factor. One example can provide a gaming accessory that can improve the game playing functionality of an electronic device, such as a phone, tablet, or other computing device. This gaming accessory can provide a physical interface for controlling game activities on the electronic device such that a screen of the electronic device remains at least largely unobstructed during game play.
